NUMBER - ADDITION and SUBTRACTION
Pupils should be taught to:
multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication

- divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context
d divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context
- perform mental calculations, including with mixed operations and large numbers
> identify common factors, common multiples and prime numbers
> use their knowledge of the order of operations to carry out calculations involving the four operations
solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why

## STATISTICS

Pupils should be taught to:
> interpret and construct pie charts and line graphs and use these to solve problems

- calculate and interpret the mean as an average

## MEASUREMENTS

> Pupils should be taught to
solve problems involving the calculation and conversion of units of measure, using decimal notation up to three decimal places where appropriate
> use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit, and vice versa, using decimal notation to up to three decimal places
> convert between miles and kilometres
> recognise that shapes with the same areas can have different perimeters and vice versa
> recognise when it is possible to use formulae for area and volume of shapes
> calculate the area of parallelograms and triangles
> calculate, estimate and compare volume of cubes and cuboids using standard units, including cubic centimetres ( cm 3 ) and cubic metres (m3), and extending to other units (for example, mm3 and km3]

## GEOMETRY - POSITION and DIRECTION

Pupils should be taught to
describe positions on the full coordinate grid (all four quadrants)
d draw and translate simple shapes on the coordinate plane, and reflect them in the axes.

## NUMBER and PLACE VALUE

Pupils should be taught to
$>$ read, write, order and compare numbers up to 10000000 and determine the value of each digit
> round any whole number to a required degree of accuracy
> use negative numbers in context, and calculate intervals across zero
$>$ solve number and practical problems that involve all of the above

## MATMS YEAR 6

## GEOMETRY - SHAPE and SPACE

Pupils should be taught to:
draw 2-D shapes using given dimensions and angles
recognise, describe and build simple 3-D shapes, including making net

- compare and classify geometric shapes based on their properties and sizes and find unknown angles in any triangles, quadrilaterals, and regular polygons
- illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius
- recognise angles where they meet at a point, are on a straight line, or are vertically opposite, and find missing angles.

## RATIO and PROPORTION

## Pupils should be taught to

- solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts
- solve problems involving the calculation of percentages [for example, of measures, and such as $15 \%$ of 360 ] and the use of percentages for comparison
- solve problems involving similar shapes where the scale
factor is known or can be found
> solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.

## FRACTIONS

Pupils should be taught to

- use common factors to simplify fractions; use common multiples to express fractions in the same denomination
> compare and order fractions, including fractions > 1
> add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions
multiply simple pairs of proper fractions, writing the answer in its simplest form [for example, $x=$ ]
> divide proper fractions by whole numbers [for example, $\div 2$ = ]
> associate a fraction with division and calculate decimal fraction equivalents [for example, 0.375 ] for a simple fraction [for example, ]
> identify the value of each digit in numbers given to three decimal places and multiply and divide numbers by 10,100 and 1000 giving answers up to three decimal places

## NUMBER - MULTIPLICATION and DIVISION

## Pupils should be taught to

$>$ multiply multi-digit numbers up to 4 digits by a twodigit whole number using the formal written method of long multiplication
> divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context
$>$ divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context
> perform mental calculations, including with mixed operations and large numbers
> identify common factors, common multiples and prime numbers
> use their knowledge of the order of operations to carry out calculations involving the four operations
> solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why solve problems involving addition, subtraction, multiplication and division [ use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy

## ALGEBRA

Pupils should be taught to:
$>$ use simple formulae

- generate and describe linear number sequences
- express missing number problems algebraically
> find pairs of numbers that satisfy an equation with two
